Hiring Manager

Oracle

Bengaluru, Karnataka, India / Hyderabad, Telangana, India

Dear Hiring Manager,

I am thrilled to submit my application for the Junior Software Engineer position within Oracle's SaaS Observability Engineering team. With a background in computer science and a strong focus on backend development and data engineering, I am particularly drawn to Oracle's mission of enabling enterprises to gain better insights, achieve higher performance, and leverage state-of-the-art cloud solutions. The opportunity to contribute to a global leader known for its technological innovation and commitment to advancing data-driven solutions is inspiring to me.

My academic foundation in computer science and hands-on experience with full-stack projects, particularly in backend engineering and data processing pipelines, have equipped me with skills well-suited to Oracle's environment. During my recent internship at ST Microelectronics as a data engineer, I focused on enhancing data pipeline efficiency and ensuring database integrity, which deepened my understanding of secure, scalable systems. This experience strengthened my proficiency in Python and database management, and it fostered my interest in observability and the impact of well-maintained, secure systems—principles that I know are integral to Oracle's engineering efforts.

What excites me most about this role is the chance to work with a talented team dedicated to enhancing observability across Oracle's SaaS offerings, and to contribute my skills toward making these systems more efficient and resilient for enterprise clients worldwide. I am inspired by the prospect of learning from industry experts at Oracle and collaborating on projects that leverage real-time data insights to improve user experience and performance. Additionally, I am enthusiastic about joining Oracle in India, where I look forward to contributing to Oracle's impactful projects and to developing a career aligned with my passion for data-centric and scalable engineering solutions.

Thank you for considering my application. I would be grateful for the opportunity to discuss how my background, skills, and career aspirations align with Oracle's goals in SaaS Observability Engineering.

Warm regards,

Mahi Mudgal
